

DATA USE POLICY

FORESEE database is freely available to the scientific community to fulfill their data needs. However, the use of FORESEE is governed by the DATA USE POLICY described in this document. The main developers of FORESEE (Anikó KERN and Zoltán BARCZA), who decided to share the database, rely on the ethics and integrity of the users to assure that the DATA USE POLICY is fully respected. The data are made freely available to the scientific community in the belief that using FORESEE will lead to new scientific insights in Central Europe, especially in the field of climate change impacts and adaptation.

FORESEE users are requested to inform the main developers about the planned activities including using the data in profit-oriented work or non-profit research. If the planned work significantly relies on FORESEE, data users are requested to INVITE the main developers to be co-authors. The invitation to contribute should be based on the first draft of the results. In any cases (e.g. if the main developers are not interested to contribute, or if FORESEE plays a minor role in the methodology or the results of the study) it is requested to properly acknowledge the main developers. We kindly ask the data users to send project reports and accepted papers to the main developers as they would like to keep track of the FORESEE related results.
